Overview

SOLIDFX is committed to continuously improving our products. This free upgrade of the FXVIEW® software gives FX10 owners powerful new features -- while still being easy to use.

This software upgrade, version 1.2.9, simplifies several aspects of the user interface, making it more intuitive; adds considerable functionality; improves performance; and resolves known issues encountered in version 1.1. Each of these areas is detailed below.

User Interface Changes

1. New overlay menus in chart and notepad views provide an intuitive and powerful user interface.
2. High-contrast, labeled menu icons clearly convey key functionality.
3. Hot spots in each corner of chart and notepad views provide instant access to 1) hide/display overlay menu, 2) close chart or notepad, 3) previous chart/page, 4) next chart/page. Hot Spots are always available whether or not the overlay menu is visible.

New Functionality/Enhancements

1. Handwritten notes can now be added, saved, hidden, shown and cleared from any chart.
2. Charts can be arranged and organized in the FXvu clipboard using drag and drop.
3. "Next" and "previous chart" functions allow sequencing directly from chart to chart without returning to menus. In combination with the user-organized FXvu clipboard, this allows the pilot to arrange the sequence of charts as needed ahead of a busy approach (e.g. arrival, approach, airport diagram can be ready, in order, for easy access). When using the sensor button interface, the left and right arrow sensors display the previous and next charts, respectively.
4. The notepad can now display multiple pages. Pages can be added with one of several template backgrounds. Custom templates are available through SOLIDFX; please call or email us for more information.
5. Add/Delete/Revision status for current data cycle clearly displayed with chart name.
6. Convenient, larger-sized "set time" and "date" functionality, right in FXVIEW® settings.
7. More airport nomenclature is displayed.
8. Battery charge indication button added to all chart and notepad views.
9. Low battery alert @ 10% - icon will change on battery charge indicator button.
10. Visibility of handwritten notes enhanced via use of a bolder stylus line.
11. "Clear All" functionality makes it easy to clear chart notes and multiple notepad pages.
12. License mechanism enhanced for fleet operator flexibility.
13. Enhanced keyboard navigation -- a long sensor touch will now traverse all the way across the soft keyboard when "typing" using sensors

14. Side by side, production and beta installations supported for beta testers. Allows retreat to production release if issues encountered in Beta installations. Note: Beta testers of 1.2.x (thanks to you all!) will see the Beta version(s) automatically removed when installing this production release.
15. Power-down option on exit separated from other options in confirmation dialog to avoid accidental shutdown.

Performance Enhancements

1. Chart rendering time has been cut in half, even on large, information-rich charts.
2. Zooming -- in and out – is now twice as fast.
3. FXVIEW initial startup time is up to 40% faster.

Issues Resolution

1. SD cards with write protection turned on are detected and reported with an error message.
2. Favorite (and other) checkboxes made easier to see.
3. Unrequested notepad opening fixed.
4. Landscape mode chart zooming error corrected.
5. Now properly open first expander every time an airport tab is selected.
6. A small pan operation from “FILL” chart view caused a toggle to the complete other end of chart. This now will pan as requested.
